

## Monitoring Trip (Dedaye)

Last Updated Monday, 27 October 2008

A monitoring trip was carried out on 05 October. A great deal of progress was observed on the plants after the use of fertilizer.

Daw Than's paddy field (10 acres)

Discussion with Daw Than

Out of 10 acres, 2 acres were not successful because of the inability to provide more seeds.

U Hla Tin's paddy field (13 acres)

Unsuccessful paddy field

Checking the paddy fields

Out of 13 acres, 3 acres were not successful even though fertilizer was applied

U Aye Lwin's paddy field (20 acres) all successful

before applying the fertilizer

Another monitoring trip is planned for the middle of November when the plants ripen.
